2.1.5. Table: PROJECTS

Table holds all projects carried out by a company. This includes:

- Contracts,
- Product development,
- R&D and,
- other internal projects.

Sources

New projects are created in following ways:

1. Projects form in Projects Management Application. Source = 'PMA'
2. Projects interface which is used to insert projects from:
 1. CRM for new contracts. Source = 'CRM'
 2. ERP/Maintenance module for facility maintenance projects. Source = 'MNT'
3. Migrated from old system prior to 2012 implementation of PMA. Source = 'OLD'

Lifecycle

Projects are regarded as open as long as they are not closed, i.e. in "CLOSED" status.

Calculations

Project begin:

Whichever is not null in this order: ACTUAL_BEGIN, EXPECTED_BEGIN, CREATED_DATE

Standard criteria

Open projects

STATUS_ID -> DICTIONARY d

where d.LABEL not like 'Closed%'

Known issues

1. Projects before 2008 have most of descriptive fields blank or incorrect (e.g. manager, customer, market)
2. Project expected begin and end are rarely updated and expected begin can be in the past for long even if project still didn't start

Columns

	Name	Data type	Description
🔑	PROJECT_ID	NUMBER	Project system ID
	PROJECT_NUMBER	VARCHAR2(25 CHAR)	Project unique business number
	PROGRAM_ID	NUMBER	Program which project is part of. Ref: programs
	NAME	VARCHAR2(500 CHAR)	Project name
	DESCRIPTION	VARCHAR2(4000 CHAR)	Brief description of a project provided by project assistant or project manager
	OBJECTIVES	VARCHAR2(4000 CHAR)	Project objectives provided by project owner
	SCOPE	VARCHAR2(4000 CHAR)	Scope of work and deliverables provided by project owner
	TYPE_ID	NUMBER	Project type. Ref: dictionary
	STATUS_ID	NUMBER	Project status from the list
	ORG_ID (Organization)	NUMBER	Organization/department within company that owns project
	MNGR_ID (Project Manager)	NUMBER	Project manager. Ref: people
	EXPECTED_BEGIN	DATE	Expected begin date defined at project creation. Then updated till actual project start date is established.

Name	Data type	Description
EXPECTED_END	DATE	Expected end date defined at project creation. Then updated till actual project end date is established.
ACTUAL_BEGIN	DATE	Project begin date as defined in contract.
ACTUAL_END	DATE	Project end date as defined by contract until project is signed off, or project actual sign off date.
CUST_ID (Customer)	NUMBER	Customer for contracts, null for internal projects. Ref: companies
CUST_MNGR_ID (Customer Manager)	NUMBER	Customer manager for contracts, null for internal projects. Ref: people
CREATED_DATE	DATE	Row creation date in the database Default value: SYSDATE.
CREATED_BY	NUMBER	Login for person that created row with UI or "P/IFACE" for data coming from projects interface table
MODIFIED_DATE	DATE	Date row was last modified. Initially = creation_date Default value: SYSDATE.
MODIFIED_BY	NUMBER	Login for person that last modified row with UI. Null if row was not modified after creation.
GEOGRAPHY_ID (Market)	NUMBER	Contract market from the list. Ref: dictionary
SOURCE	VARCHAR2(10 BYTE)	Row source. 'PMA' for data entered to main UI: Project Management Application. Other values come from interface table. 'CRM' for data from CRM.

4. Costs

Project costs are tracked in two main logs:

1. CST_PROJECT_TIME_LOG - holds cost of labor of company employees
2. CST_PROJECT_COSTS - holds all other costs

4.1. Tables

4.1.1. Table: CST_HOURLY_RATES

Dictionary holding current hourly cost rates that are used to calculate cost of work performed by employees. Each department and employee has assigned one rate from the dictionary.

Columns

Name	Data type	Description
COST_RATE_CODE	VARCHAR2(10 CHAR)	
COST_RATE	NUMBER	
CREATED_DATE	DATE	Default value: SYSDATE.
CREATED_BY	NUMBER	
MODIFIED_DATE	DATE	Default value: sysdate.
